Conventional echocardiography detected "leaflet morphology disorder" of the mitral valve in 16 patients with moderate to severe mitral stenosis. In 8 of them the disorder was caused by immaturity and in the other 8 by increased thickness of the mitral leaflet. The height of the posterior leaflet below the mitral commissures (PCM) on the parasternal short-axis view was significantly decreased, even in the mitral leaflet with immaturity. Measurements of the PCM were significantly correlated with the severity of mitral stenosis. The index of the left atrial (LA) dimension (LA dimension/left ventricular end-diastolic dimension [LVDd]) on the parasternal short-axis view was significantly correlated with the degree of the severity of mitral stenosis. We could not find any significant difference in the parameters of the left ventricle among the patients with and without "leaflet morphology disorder". The atrial systolic excursion was significantly correlated with the degree of the severity of mitral stenosis and the index of the LA dimension. The area of the left atrium (LA area) on the parasternal long-axis view was significantly decreased, and the index of the LA area (LA area/LVDd) was significantly correlated with the severity of mitral stenosis. Echocardiography is useful for detecting "leaflet morphology disorder" of the mitral valve. The severity of mitral stenosis is well reflected by the index of the LA dimension and the index of the LA area.Q: WPF: Custom styles of a controls' resource in same Assembly I have a wpf project that has many controls in it. KeyMacro is an application designed to perform macro actions on the documents it finds. Its main purpose is to speed up processes that normally require the users to manually perform. This utility can create complex macros in a matter of seconds, thanks to its powerful set of options and tools, and can then be applied to the selected documents. This application comes with a wizard-based interface that allows users to create their own macros with relative ease. By simply dragging and dropping the actions they want to perform on the selected documents, they can obtain a fully functional macro that can then be applied to the documents by simply clicking on the "Run" button. Once created, the macros can be saved in different formats, and users can also share them among their colleagues, as well as set them to be performed automatically, after the creation of the document. This can be made possible by using a button that offers users the possibility to choose what to run on a document, after the creation of it, or even at the right time and in certain conditions. This is done through a wizard that asks users for the option they want to choose, as well as the type of action they want to carry out. However, once created, macros can be saved in two different formats. The first is the MTM file, and the second is the XML file. Users can also save the macros in two different versions, which is useful if they want to apply them in a different way. Users can then name the macros by clicking on the "Save" button, thus creating new files with the name users want to assign to them. This utility can scan in different formats, including XML, MTM, RTF, DIVX, WMV and JPEG. It can even extract data from PDF files. In order to make this possible, the application allows users to select the PDF format they want to open, and it automatically inserts the data in the chosen option, to be used in the macro later on.
