RadioLogger Crack + Download

RadioLogger is a software application specialized in recording radio station broadcast on your computer. Its purpose is to offer a simple yet efficient way for helping you record and archive 24 hours a day or only at specified time intervals. User-friendly interface You are welcomed by a multi-tabbed layout that provides quick access to the Recording and Archive panels. Additionally, the tool displays information about the codec used for storing the recording, program's status (recording, stopped), recorded time, and others. The interface is quite straightforward, and you may check out the help manual for extra information about each dedicated parameter. Recording operations The recording panel is highly intuitive and allows you to schedule the entire process on the fly. The tool displays all days of the current week and hours for each day, and gives you the possibility to schedule a new recording session by simply performing a double-click mouse operation on the corresponding block. Scheduled tasks are automatically colored green, and you may start or stop the recording process or activate the automatic mode. The Archive tab lists all recorded files and provides additional information about each one, such as start and end time, length, filename, and size. Additionally, you are allowed to listen to any of the recorded files, play, pause, or stop the current audio selection, and seek for a position in the audio streams. Plenty of configuration settings to experiment with RadioLogger gives you the possibility to select the driver and device or network stream (URL) used for recording, pick the output format (MP3, OGG, AAC), alter the sample rate, as well as choose the audio channels (mono or stereo) and playback device. What's more, you are allowed to set up file naming rules, specify the saving directory, automatically increment numbers for each filename, store the recorded files for a user-defined number of days, split the recordings by time segments (custom number of minutes), and make the program run at Windows startup. Simple yet very powerful tool All in all, RadioLogger proves to be a reliable piece of software that comprises a handy suite of dedicated parameters. The intuitive layout makes it ideal for rookies and professionals alike. The software program by Scratch Audio Ltd is absolutely free to download and try out. Xidev 4.2 Xidev software program provides you with a comprehensive solution for recording sound from microphone. The application allows you to record sound with high sound quality and automatically archive it

RadioLogger Crack + PC/Windows

This application runs in your system tray and allows you to record and archive your favorite internet radio channels without installing other third-party applications or service. The application includes powerful features and offers plenty of customization options to configure it to your needs. It is designed to work perfectly as a background application in Windows XP/Vista/7/8/10 (32-bit/64-bit) without having to add any additional service or install any hardware components. You are also allowed to manually manage recording schedule and archive dates, stop automatic recording and get continuous or time-based progress information. This tool is absolutely FREE, and you can download it for any Windows version, including all editions and custom builds, including Professional, Ultimate, and Enterprise editions and all languages, from the developer's website. Key Features: • Possibility to create custom archive/recording schedule lists • Export recorded files into a.zip or.7z archives • Archive recording data in XML format • Possibility to automatically record online radio stations (work with internet radio stations) • Possibility to manually define the recording schedule and archive dates • Possibility to configure the application to run at Windows startup • Works with all internet radio channels, including those that are not recorded by WMP • Possibility to record all available online radio stations, or the ones which are listed in the standard online radio station list • Get progress information, warnings, and other helpful messages • Automatic cancellation of recording, when user leaves the application • Playback of the recording files • Possibility to automatically change the default recording media • Possibility to manually select the type of the output media (MP3, OGG, AAC) • Time interval for automatic stopping of recording • Media library, where recorded files are stored • Possibility to add your favorite online radio stations as a custom list • Built-in RSS-client to monitor RSS feeds and record new updates in your media library • Search function for your favorite online radio channels • It is highly recommended to use the latest version of the application in order to experience all the added features and improvements • Possibility to manually change the application's audio output (mono or stereo) • Possibility to manually change the sample rate (44.1kHz, 44.2kHz, 48kHz, 88.2kHz, 96kHz) • Possibility to manually change the input device (ASIO, WASAPI, etc.) 1d6a3396d6

RadioLogger Crack + Free License Key Free Download

Easy to use digital radio recorder and tuner software that lets you capture and convert digital radio broadcast into MP3, OGG, and AAC formats. A stylish, easy-to-use toolkit that allows you to quickly record your favorite radio stations, edit audio files, and convert them to MP3, OGG, and WMA formats. Freely available at: A very professional and easy-to-use digital radio recorder and tuner software that lets you capture and convert digital radio broadcast into MP3, OGG, and AAC formats. Freely available at: This project focuses on the visualisation of digital radio broadcasts. We have developed a system to display the radio broadcast on a digital radio over the internet. The application consist of two windows: one is used to record the radio broadcasts. The other is used to display the radio broadcast. The recording window is fully customizable. You can change the recorded length, the time it will record and the start and end time of the broadcast. The program can also be used to broadcast the radio broadcasts. You can either select an internet broadcast or a broadcast provided by the streaming service. The broadcast window displays the radio station in mp3 format (in the case of streaming services) and ogg (in the case of radio broadcast from a radio station or a web radio). It also displays the language of the radio station and the visualisation of the content of the radio broadcast. It was designed as a software for capturing and archiving of any digital audio content, and more specifically of public domain radio streaming. It's a simple and handy tool for those who like to listen to audio content online. The data sent from the radio station is encoded using a v. 14 algorithm.The player software is compatible with most standard web radios, and several streaming services (directly or via an intermediary). The player software does not require installation, and is therefore easy to use. It's a digital radio streaming software with a graphical interface, designed to make easy to use a software that is usually complicated to use. It allows you to listen to the radio stations from any location over the Internet and to download them to your computer. The project has been developed using the Microsoft Visual Studio 2005. RadioReceivers project is a tool that allows you to record any audio program broadcast on the radio stations.
